

DEKO FG New York

New Yorker inspired glazed partition

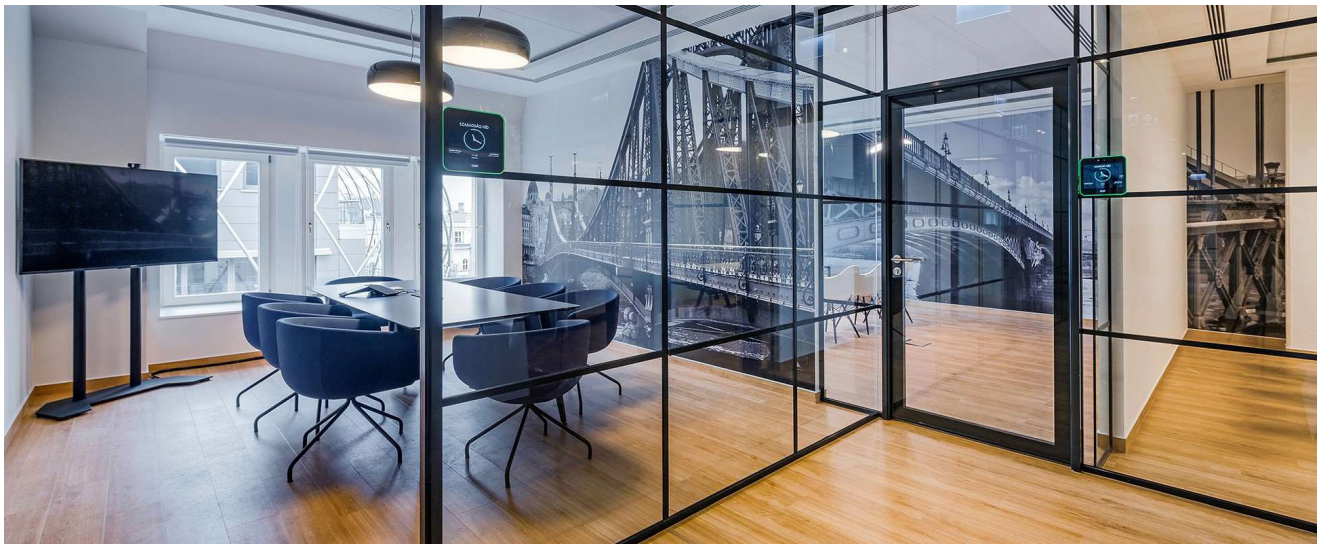

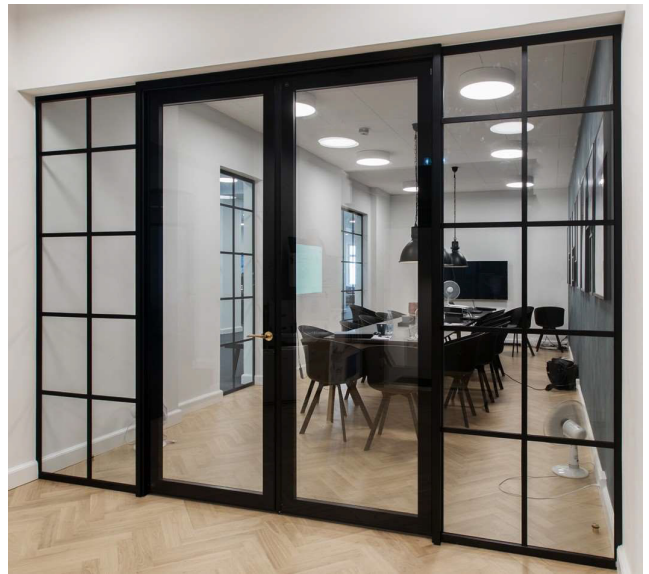

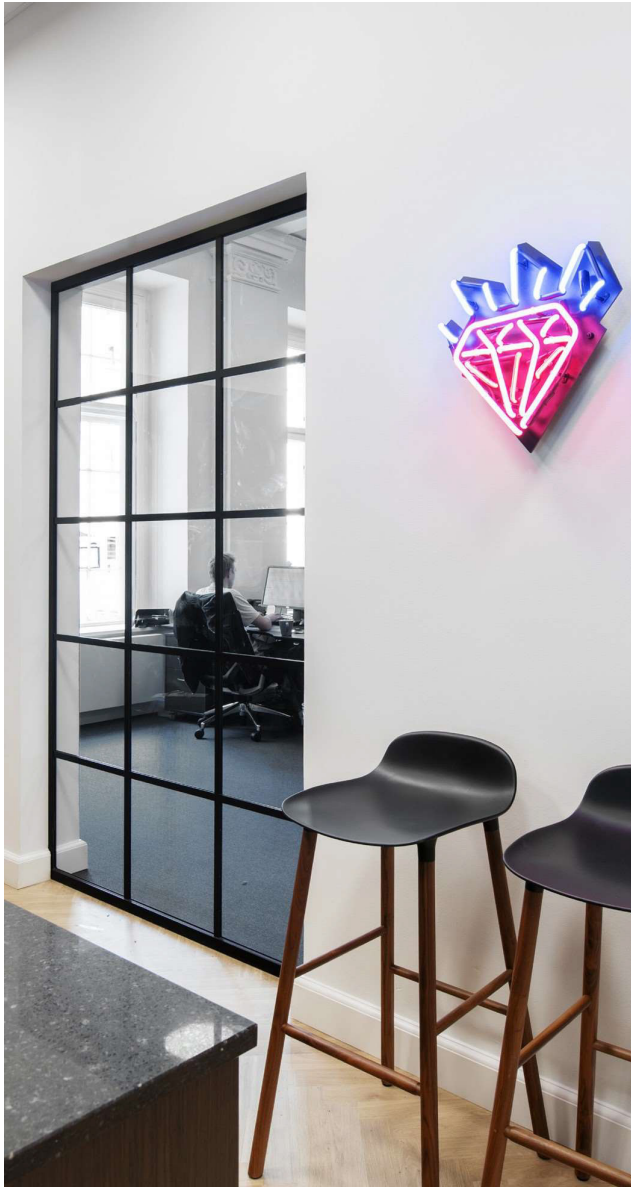

Glazed partition solution in industrial design

The DEKO FG New York consists of thin, single glazed partition, designed to visually represent a structure divided by surface mullions, that is fixed and finished off with slim, aluminum profiles where the glazed panels meet the adjacent building elements.

The partition is customizable and is made in individual formats and mullion divisions resulting in a perfect solution for improved aesthetics without compromising on the acoustics.

The glass provides a sound reduction of up to 40 dB, depending on the built-in glass type. Several door types can be chosen - solid, glazed or sliding doors.

The DEKO FG New York glazed partition solution offers a flexible system with an exclusive industrial design, that can be customized to suit specific design requests or client needs.
